

Abstract

A system for trading in a security having a value based on the prospective income of a performer includes a first processor and a plurality of remote processors. The first processor receives and stores a plurality of bids for the purchase of one or more security instruments, each security instrument having a value based on the prospective income of a performer, the value based at least in part on a contingent portion of the prospective income, the prospective income being service based. The plurality of remote processors are further adapted operable to communicate the plurality of bids to the first processor.
